

ZHEFIRO GINGIVA composite system

With Gingiva masses highly aesthetic gingival areas can be easily reproduced.
Gingiva masses are independent from the chromatic system and are available in different color shades.
The color shades range from light pink to purple, to be able to easily imitate the natural gum.

Gingiva masses can be combined with each other, they are available in the colors:

WHITE
LIGHT
MEDIUM
DARK
EXTRADARK

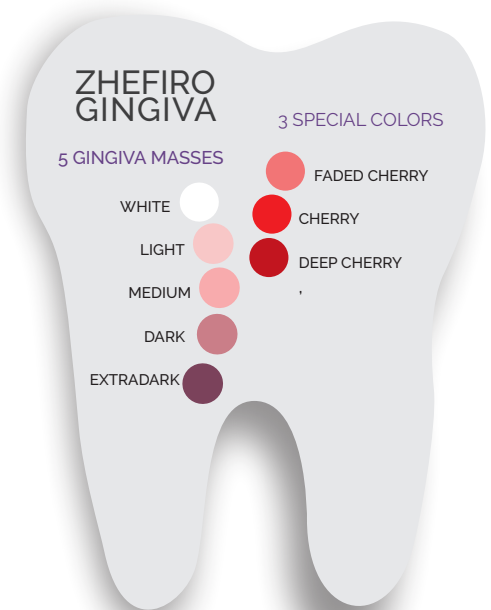

3 are the special colors
CHERRY
FADED CHERRY
DEEP CHERRY

Characteristics;

High stability
Low plaque attachment
Natural aesthetic effect
Abrasion resistance
Excellent polishability

Furthermore, Intensive stains can also be used for internal and surface characterizations.

INDICATIONS

- Imitation of natural gum
- Covering of long dental necks in bridge constructions
- Closing of large interdental spaces
- Modelling of areas with gingival involvement in implant structures
- Prosthetic superstructures of various kinds
- Characterizations of removable prostheses.

Bisfenolo Free
