Our Journey in Europe

The Sexing Technologies[®] European division began in 2007 with the opening of our first lab in the Netherlands. What started as one operation has expanded into **eleven laboratories across eight countries and one mobile unit**, with further facilities — including a second mobile lab — on the way. This journey reflects our commitment to bringing advanced reproductive technologies closer to our customers and their herds.

Pioneering Genetic Solutions

Sexing Technologies[®] has established a strong and growing presence around the world, driving forward innovations in animal reproduction through state-of-the-art gender-sorting semen technology, shaping the future of agriculture.
