Calculating Monthly Tuition w/ \$88 classes:

- Step 1: Determine how many \$88 classes are involved.
- Step 2: Determine how many regular classes are involved.
- Step 3: Determine the total number of classes.
- Step 4: Calculate the monthly tuition of regular classes based on the regular rate of the total number of classes.

**EXAMPLE:** An Elite student has 3 classes @ \$88 and 4 regular classes = 7 classes total.

**Calculations:**

Part A.) 3 classes @ \$88 = \$240. With 7 classes as their total enrollment, the calculation for the 4 regular classes is 4 X \$11 (rate of 7 classes is \$11) x 4 weeks for a monthly total of \$176.

Monthly tuition is \$240 + \$176 = \$416/month.

Part B.) To prorate for the month of August, divide \$416 by 2 = \$208.

Part C.) If said dancer has one or more active siblings, divide the total family tuition by the total number of children and post tuition charges accordingly.
