- Versafin System & Tail Blocks
- Closed Cell PU Foam Core
- Performance Glass Layup
- C.A.P.T Profile
- Speed V-Tech
- Wide tunnel
- Variable bevel

CONNELLY

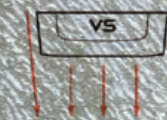

STOCK

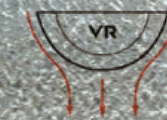

Designed to offer a balanced tail depth through the turn and across the wake.

SQUARE

A square tail shape that adds lift, support and provides a clean release off the wake.

ROUND

The round tail lets the ski sit deeper in the water into the turn, adding control at higher speeds for quicker turns and reduced tail blowout.

ROUND TO SQUARE

Allows the ski to ride deeper in the water on left turns and provides more tip pressure on the right hand turns. This may benefit the skier on their inside and/or offside turns depending on their strength and style.

SQUARE TO ROUND

Allows the ski to ride deeper in the water on right turns and provides more tip pressure on the left hand turns. This may benefit the skier on their inside and/or offside turns depending on their strength and style.

**MOST
CUSTOMISABLE
SKI EVER**

VERSATAIL

Connelly versatail gives you the ability to fine tune the flow of water off the tail of the ski, taking a step beyond the standard fin and binding position adjustments. A change in tail geometry can be the difference in a ski performing in perfect rhythm with your personal style.
