# GENERAL PROTECTION MAT INSTALLATION GUIDE

## INSTALLING THE MATS

1. Ensure surface is clean and dry prior to installing It is important to have the logo side facing up
2. Kick the roll out in a straight line to create your first row
3. When starting the second row, overlap the first roll of the matting by approximately 3cm
4. Tape along the seams to secure the mat to itself, preventing dust, dirt and debris from getting in underneath. This will also reduce movement of the mat
5. Complete each row as above until your surface is covered
6. We recommend covering the whole surface to reduce the risk of uneven UV exposure
7. The mat can be lifted to inspect the substrate at any time or re-adjusted as needed

Always consult with your Honcho rep to ensure substrate suitability.

## TAPING/SECURING THE MAT

We recommend using Gorilla Tape to secure the mat rows together. Gorilla Tape should **not** be applied directly to the surface as it can leave residue.

Gorilla Tape is available for purchase through Honcho Supplies.
