

Beautifully Designed for Safety \& Convenience

## Nelcome

Enjoy fresh eggs and family fun with a quality-built chicken coop! Choose from a variety of styles and sizes - with a long list of standard features.
Or let us customize your chicken coop to meet your specific needs. Either way... it's sure to give your chickens something to cluck about!

With your complete satisfaction a top priority, zour family-owned business is proud to offer you a full line of handcrafted chicken coops at affordable prices. All designed for the comfort and safety of your feathered friends... and easier egg collecting for you.

## Frosk Egga

## Table Cr Contents

I can tell you how many chickens each coop will hold throughout this catalog. Just look for the chicken and you will see the number on the chicken.

## Standard Features

- Paint or Stain
- Keyed Entry Door
- Chicken Door
- Chicken Ramp
- Nesting Boxes
- Roosting Bar
- Vent Lid or Vent
- Window with Screen
- Asphalt Shingles
- Aluminum Drip Edge
- 5/8 LP Flooring with 10 year waranty
- P.T. Legs and Runners
- L.P Tech Shield Roof Sheathing

Note: Chicken Coop sizes do not include outside nesting boxes.

## Options for an easy care henhouse

Epoxy Floor

Litter Tray
(not recommended for larger models)

Electrical Package

## Easy Care Tijps for healthy and safe chickens:

- Glassboard floor makes clean up a breeze!
- A removable litter tray makes it much easier to keep your chickens cleaner and healthier.

- Adding an electrical package allows for added conveniences such as a heated water bowl to relieve you of the task of changing water several times a day in the freezing winters.
- Automatic doors provide extra safety for your chickens. Nothing is so devastating as forgetting to shut them up for the night and having a predator ruin your flock.
- Wheels - fertilize your whole yard without sacrificing the grass. Being able to move the chicken house easily keeps the grass healthier and provides your chickens fresh scratching areas.

Automatic Door (Available in Electric or Solar)

$7 \times 12$ Quaker

- With board and batten siding
- 10 |" high - 4" off ground

## Tips for keeping a successful henhouse

Interior view of Quaker

## Gulicelines for housing needs:

- Most coop guides suggest approximately 2 square feet of space per adult bird.
- At a bare minimum, the coop should be easy to clean, well ventilated but draft-free, include clean watering and feeding stations, and offer adequate roosts.
- Good, natural light is a plus.
- Dirt floors can work where the soil is sandy and the drainage reasonable, but a wooden floor is vastly easier to clean and protect. We recommend our epoxy surface for ease of cleaning.
- Good bedding, such as sawdust (untreated wood only), wood shavings, or chopped straw is ideal.

## All Year Round!

When keeping chickens through the winter, don't forget that:

- Chickens need extra grain to keep them warm and also to compensate for lack of grass and insects.
- Keeping the coop filled with the recommended amount of chickens helps keep the temperature comfortable.
- Make sure the birds have water ... not ice.

## Tips for Problem Solving in henhouse

Interior view of Quaker

## - Broody Hens who refuse to leave the nest

1. Try to break the habit by removing eggs as soon as they are laid.
2. Keep her away from the nesting boxes for approximately a week.
3. Nest inserts can be used which cause eggs to roll away as soon as they are laid.

## - Blocked or Sour Crop

1. Keep poultry grit readily available at all times to help healthy digestion.
2. Try feeding her some oil and massaging several times a day to loosen blockage.
3. Garlic and natural yogurt can also be tried.

## Common Problems

with backyard chickens, and how to fix them.

## - Hen Pecking

1. Can be caused by boredom. Add items for distraction: a head of cabbage, greens, or hang a Peck a Block in the run.
2. Overcrowding can cause pecking, keep flock at the recommended size for your house.
3. If one hen seems to be being picked on and blood is being drawn, she must be removed as blood only encourages more pecking. Anti peck products can also be applied to the picked on hen to try to break the habit.

## ol-7rame

The A-Frame is a classic style favored by many. With simple straight lines and beautiful trim, it has its own touch of class.

## More Tips for Problem Solving in the henhouse

Keep chickens safe with a ramp

## - Feeding Incorrectly

1. Table scraps are not a good solution for chickens. They do not provide the necessary diet needed to promote good egg laying and long life.
2. Only feeding on grass will usually also be problematic as necessary nutrition is not received from only grasses. Today's breed of chicken cannot survive on the same diet as chickens from 30 years ago.
3. Make sure wild birds do not have access to your chickens water and feed containers.
4. Chickens need twice as much water as they do feed. If you do not use an automatic waterer, change water daily and make sure there is always plenty available. Lack of sufficient water will take large tolls on the health of a chicken very quickly as they need water to digest food properly.

## More Common

 Problems with backyard chickens, and how to fix them.
## - External Parasites (ticks, mites etc)

1. Most are successfully treated with products available from your local rural merchandiser and you should routinely treat the chickens every 2 or 3 months.

## - Red Mites

2. Chickens infested with red mites will stop or slow down laying eggs, hesitate to roost in normal area, and may become anemic.
3. Take a white tissue and wipe along the underside of perches at night when birds are roosting. Look for tell tale blood smears.
4. Check often as they multiply quickly and are hard to get rid of if caught after they become very evident.
5. For best results treat several times in the course of several weeks to get total control over the situation with a combination of wet and dry solutions.

A chicken house with wiring allows for automatic waterers and lights.

## Dutch

## Chicken Breeds to Consider for Your henhouse

1. Rhode Island Red

Great layer of brown eggs. Good looking chicken. Good disposition.

2. Buff Orpington

Fat yellow chicken which lays brown eggs. Very docile.

## 3. Barred Rock

Interesting black and white striped pattern. Decent layer of brown eggs and good disposition.

## 4. Americauna

Fuzzy face, large chicken. Lays blue eggs! Good disposition, generally friendly.

## 5. White Leghorn

Prolific white egg layer. Nervous and flighty, not as docile.

The Lean -To is a lovely little space saver. It is designed to allow you to set it against a building or wall. Find the size that is right for you.

## Predators of the <br> henhouse

## Predators and how they kill

## - Raccoons

Raccoons prey on chickens at night and sometimes during the day. They can reach through wire and will often pull the chickens head or legs off, through the wire. They also can tunnel under runs without wire flooring. Easy latches can be opened by raccoons.

## - Dogs

Most dogs are natural predators and will find chickens very hard to resist. Even family pets, unless trained, will be tempted by your chickens. Most dogs will eat the chicken, leaving only feathers. Dogs can be trained to let them alone or even guard them. Some dogs will only chase or 'play' with them but the trauma can keep the hen from laying eggs for months.

## - Skunks

Skunks tend to eat the eggs more than kill adult poultry but they have been known to do that occasionally also. Eggs will usually be crushed inwardly and chickens will have the head removed as the skunk wants to drink the blood.

## - Hawks

Hawks will kill adult chickens if they are outside without the protection of a cage with a wired roof. Prey is killed with talons and torn into bite size pieces with the beak.

## - Snakes

Venomous snakes can kill full sized hens but most snakes will go for the eggs. Keep the henhouse secure with no cracks or holes. Keep tall grass cut and do not have your henhouse close to compost piles or piles of logs or rocks, as these are snakes favorite hideouts.

## - Cats

Cats (even domestic pets) enjoy the thrill of the hunt and can prey on small chickens and chicks. They can be trained to see them as fellow pets however. Metal mesh, barbed wire picket fence and tall hedges with thick lower growth can deter them.

## - Opossum

Opossum will eat the chicken feed, eggs, chicks and will attack chickens. Keep a strong cage and your chickens penned at night.

## - Bobcat, Coyotes, Fox

All of these enjoy eating chicken. Secure your chickens at dusk in a tight and strong henhouse to deter them. Large breed dogs are good to dissuade the animals from the property or at least to alert you to their presence.

## - Other Predators

rats, mice, owl, crow, squirrel, Fisher cat, bear, mice, mink, weasel, lice, mites
