Healthy H2O Systems

Air Regen

"Air Regen" Or Air Injection Oxidizing (AIO) systems are ideal for removing lower levels of iron, manganese & Hydrogen Sulfide from well water. The AIO maintains an "Air Pocket" in the top of the tank that oxidizes the 3 elements. The AIO filter media bed then traps the oxidized elements. The trapped elements are then removed from the filter by "backwashing" the media every 1 to 3 days. The backwash also refreshes the Air Pocket so it is ready to oxidize the elements. In addition, the water is enhanced by adding dissolved oxygen to the water.

The AIO is a single tank system that is efficient and cost effective. It can remove up to 5 ppm of Hydrogen Sulfide, 7 ppm Iron & .5 ppm Manganese. By reducing the rust & slime in the water your appliances, faucets and clothing will last longer. No more orange stains and/or "rotten egg" odor. The water will taste better and bathing in clean water will make skin & hair softer. 10 Year warranty on tank, media and valve
