HOW TO MAKE MONEY
TRADING
YOUR 3 STEPS TO SUCCESS

PETER NORTHWOOD
Co-Founder, Inteligex

90% of Retail Traders lose money trading. But if you're in the winning 10% it is the key to unlocking a different life for you:

- You could be earning a serious extra income working a maximum of a couple of hours a day (we recommend 45 - 60 minutes)
- When you become consistently profitable you can look to become a Lifestyle Trader. You can give up your day job and trade whenever you want to from wherever you are. You trade to fund the lifestyle you want.

In today's high volume, volatile, interconnected markets you need **an edge** to be a successful Trader. You just can't rely on old school trading techniques of Moving Averages and Technical Analysis anymore.

You need access to information that other Traders don't have.

Remember trading is a zero sum game.
For every $1 made by someone, there is $1 lost by someone else.

Inteligex gives you a trading edge. It's a proven, award winning system that uses artificial intelligence, machine learning and sophisticated math to decode the markets and find you winning trades. It then shows you how to run the trade to maximize your profit.

It's what we call 'High Probability Trading' and it can put you into that
winning 10%

How do I learn?

The world of trading can seem daunting and complicated. We've used technology to make it simple for you. In fact, one of the reasons we started Inteligex was that we saw too many companies offering difficult to use ineffective tools to help Traders. There was a gap in the market and Inteligex has filled it.

Inteligex gives you Hedge Fund level technology in a simple to learn, easy to use package.

We teach you the core skills needed to make money trading. Inteligex works on any market and over any timeframe so it's great for commodities, crypto, forex, futures, stocks and options.

Every new Member gets full training and support and typically most people are up to speed and making good money within 2-3 months. If you can follow a process, you can learn Inteligex.

If you've traded before you'll probably pick it up more quickly but even if you've never traded, 3 months is still realistic, our Members have proved it.

The pace that you learn at is up to you. We provide you with Manuals, Videos, Courses and daily training/coaching in our LIVE Trading Room.

Just follow the process and you'll see that it works!

Decoding the Markets

Financial markets move in a seemingly endless series of upward rallies and downward reactions. The direction at any one time reflects who has the most power. Is it the bulls or the bears? Are there more buyers or sellers?

> To make a successful trade you need to know whether the buyers or sellers have the most power and when that power is going to change hands i.e. when the trend is going to reverse. But surely you can only know the probability of a Trade's success if you can predict the markets.

But can you predict the markets?

> Well the answer is YES because the markets repeat themselves. No matter how far you go back in time there are always patterns that can be seen. In fact the whole field of Technical Analysis is based on the premise that the markets repeat themselves and that by identifying patterns you can predict what will happen next.

The Inteligex system has looked at millions of market data points and run them through Machine Learning modules and Artificial Intelligence to produce Trade Signals, dynamic lines of Support and Resistance and Market Predictors which identify high probability trades.

This means no more Technical Analysis and no more guessing at trade entry points, market momentum, stop placements or targets. **Inteligex shows you the way.** Our Members like to think of it as their GPS. It shows you how to get to your destination.

Say GOODBYE to *Trader Anxiety and Emotion* and say HELLO to clear thinking and maximizing your profits

The Trading Toolkit

In order to trade successfully there are only two things you need to know: where the market is trying to get to and what is stopping it from getting there.

The Inteligex 3 Step Process shows you how to use the Inteligex Trade Signals and Indicators to answer both of those questions so that you can find and execute High Probability Trades.

Signal	Filter	Trade?
Wait for a Trade Signal.	Identify the direction and strength of market movement and how far the trade has to run.	Run your trade by setting/adjusting your targets and stops

The sophisticated technology within Inteligex gives you all the information you need. Each step helps you assess the probability of the trade so that you can be sure you have the highest possible chance of success.

All you do is decide whether you want to take the trade and use the Indicators to decide how long you want to run it for. ***What could be simpler?***

The 3 step process also brings discipline to your trading and because trading is experiential the more you use it the better you get. Your confidence will increase and you'll no longer get distracted by Trader Emotion.   Just follow the 3 steps and see your trading profitably dramatically improve.

> Inteligex gives you access to information other Traders don't have. You're stacking the odds in your favor!
Signal

Wait for a Trade Signal

Inteligex generates Trade Signals (also known as Trade Alerts) covering both trend trades and reversal trades. A Trend Trade is a trade taken in the current market direction and a Reversal Trade is a trade taken as the market changes direction. When Inteligex sees a trade opportunity then you will get a Trade Signal.

The signal is designed to do only one thing: to show you the proposed trade direction. The signal will point upwards to indicate a long trade and point downwards to indicate a short trade.

- Green is a long trade signal
- Red is a short trade signal

What Signals look like

The diagrams below show examples of Trade Signals, the signal will be either a triangle or an arrow (depending on your charting platform).

Filter

Identify the direction and strength of market movement and how far the trade is likely to run

The next step is to filter the Trade Signal. You do this by using the Trade Indicators within Inteligex. There are two Indicators:

- **Bombe** lines - dynamic lines of support and resistance. There are multiple lines and each line represents a price boundary
- **Cribs** - points where the market wants to get to. There are two cribs above each candle and two cribs below each candle.

Bombe lines show you the direction the market is moving in and what it is likely to do next.
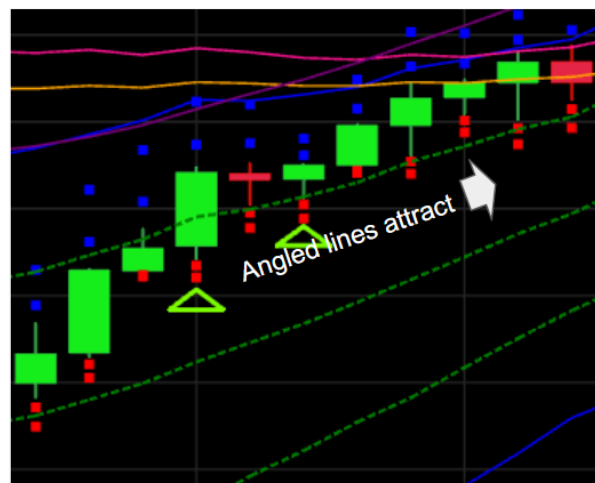

You can think of it like driving a car, if there is clear space in front of you, you can make good progress. If you imagine that each line is a wooden fence, then the more lines there are in front of you the harder it is to progress.

The "bombe" - Dynamic Support and Resistance - "roads"

Color coded probability levels
In the diagram above we know the probability of the price staying within each of the shown boundaries (the lines on the chart). And if we know those probabilities than we know when to take a trade, putting it simply:

- As we move away from a line we're likely to head to the middle of the range
- When we get close to a line we're likely to move back

A flat line tends to give strong rejection, so the index is more likely to move away. An angled line tends to pull the index along, until the move runs out of momentum.

The Inteligex bombe is not curve-fitted in any way. It is a statistics based decision-making system that works for all markets, all intervals and all trading styles. This allows Inteligex to deliver unambiguous and easily actionable buy/sell/stop signals for you to trade. Time after time after time.

Cribs predict areas where the price will likely head to within a number of time periods. Depending on what chart time frame you are using, they can predict price targets and stops for minutes, hours or even months. The crib closest to the top (or bottom) is the interim crib, the crib furthest from the top (or bottom) of a candle is the target crib.
We teach you how to use the bombe lines and cribs to decipher where the market wants to get to, how strong the move is and what might get in the way.

Trade

Run your trade by setting and adjusting your targets and stops

You then simply have to run your trade using the cribs to set your Target and Stop.

This [two minute video](#) shows how easy it is.

That's it. That's how simple it is to make money trading with Inteligex. There is a clear process and all you need to do is follow it.

Of course you will need to learn it, but it's designed to be as easy to learn as possible.

How long will it take you to learn? Almost always under 3 months from zero to profitable.

If you've traded before and understand the basic principles then you have a flying start but even novices pick it up relatively quickly.

What's more, the system gives structure to your trading plan. This removes a lot of the emotion that comes with trading, which in itself causes losses, and gives you confidence to take trades.
