

Fraud, Scams, Ransomware: Small Businesses React

Full Survey Results

— FEBRUARY 2026

Key Takeaways

1

The \$131 Billion Annual Fraud Burden

Small businesses face significant financial impact from cybercrime: fraud, scams, and ransomware cost small businesses at least an estimated **\$131 billion last year**. More than seven-in-ten (72%) experienced attacks, with incidents disrupting operations—43% report difficulty **accepting online payments**, and 40% struggle to attract **new customers** as a result. Those attacks cost an estimated average of **\$92k per business**.

2

Awareness Spreads Faster Than Preparedness

While 63% of small businesses view cyber threats as a problem, **only 30% feel well-prepared** for ransomware attacks and just 31% for social engineering scams. Larger small businesses feel more prepared and have the tools to defend against fraud better than their smaller peers.

3

Fraud Defense is a Shared Responsibility

Small businesses accept responsibility for defense while expecting others to share the burden—82% say business owners should be responsible for prevention and protection, but 81% **also expect banks and payment platforms** to bear some responsibility largely because they are most likely to have visibility. **85% say they are willing to report incidents** when an incident occurs and **77% of victims do report**.

INTRODUCTION

Methodology

This poll was conducted between **December 19 - 29, 2025** among a sample of **506 small business owners in the United States**. The interviews were conducted online, and the data were weighted to approximate a target sample of small businesses based on enterprise size, NAICS industry grouping, and region.

Results from the full survey have a margin of error of plus or minus **4 percentage points**
