

PURCHASING POLICY

When purchasing products, the following elements constitute the main framework for the purchasing process, unless there are obvious differences in price and quality.

- Supporting local businesses and being selected first
- Pick up vegetables and fruits from local producers without turning into industrial products
- To prefer products that are policy-driven or produced using sustainable resources
- To observe fair trade and not to use the economic and reputation of our organization as an element of pressure and threat to product suppliers
- To work with suppliers who deliver with less packaging
- Prioritizing suppliers with ISO, HACCP and similar quality standards
- To support enterprises trying to create infrastructure for energy saving

In this policy, in order to support a sustainable tourism economy, regional development and to minimize environmental damage; initiative and flexibility during the implementation can not be used.
