

ASCENT TMB3 BENDING & TRIM MACHINE

The most versatile CNC bending machine on the market. One machine creates channel letter side return and trim. This machine is perfect for entry-level channel letters automation and as a Trim machine.

Competitively priced, the highest-quality and output speed

- Using the "BEAD" process to make the flanging on the channel letter side return from 0.040" aluminum coil.
- Channel letter side return from 0.040" aluminum coil for reverse/Halo
- Processing all plastic trims
- Convert flat aluminum coil to aluminum trim and make the shape of the letter

The benefit of using aluminum is that the trim will not fade, crack or distort over time. In addition, of course, you benefit from significantly reducing the labor in manually forming plastic trim. The price per foot for the aluminum coils is roughly half the cost of traditional plastic trim the customer saves on assembly time. The aluminum coil comes in a variety of colors. We keep a good stock in White, Black, and Red.

CUSTOM COLORS AVAILABLE FOR NATIONAL PROGRAMS

- Comes fully programmable, and it is calibrated for all the materials; adding future new materials is extremely easy.
- The channel letter bending machine comes with all necessary components, including a motorized coil holder
- We equipped the machine with a 360° cutter that will make a notch in the accurate and correct position.
