Kona Aquatics Conference

Kona's unique oceanography yields cutting-edge research from the shoreline to the vibrant reefs and into the offshore pelagic environment that attracts an equally diverse range of independent institutions, companies, nonprofits, and resource managers. In this light, we propose dedicating two days to discuss and celebrate the diverse ways in which we all use and study Kona's oceanic environment.

Hosted by Hawaii Wildlife Fund and Technical Aquatic Research and Exploration, this meeting will unite those in our offshore community to exchange ideas and create connections. At the same time, we hope to provide a platform to disseminate the fruits of our work to the ocean-minded public.

We are still working on many of the details, but for now save the date on your calendar- November 5-6, 2026. If you are working in or learning something new about the ocean, start considering if you would like to share your work. Whether you are a scientist, an industry professional, science communicator, student, or just ocean-curious, we would love to see you there!
