The energy you need

BOILER SERVICE

WHY YOU SHOULD HAVE YOUR BOILER SERVICED ANNUALLY...

- Ensures your boiler is working properly and efficiently to avoid wasting money on your energy bills.
- A faulty boiler could be leaking poisonous carbon monoxide fumes- these fumes are odourless and colourless!
- Your manufacturer's warranty may become invalid if your boiler is not serviced regularly.

WHAT DOES IT INVOLVE?

- We remove the casing to enable us to inspect the boiler for any leaks and corrosion.
- We check all the controls and main components to ensure they are all working.
- We perform a gas pressure check.
- We will look at the flue to make sure it's not emitting any dangerous fumes.
- When the boiler casing is put back on we check that the seal works properly.
- Finally to evidence these checks have been carried out we leave you with a Gas Safe Service Certificate

You can trust Adroit Services Limited to service your boiler properly. All our engineers are approved by Gas Safe, the UK's official registration body designed to protect the public against unqualified gas engineers and unsafe gas work.
