

GAS FIRE SERVICE

WHY YOU SHOULD HAVE YOUR GAS FIRE SERVICED ANNUALLY...

- Ensures your gas fire is working properly and efficiently.
- Ensures that all the products of combustion are being extracted into the chimney correctly and not spilling poisonous carbon monoxide into the room- these fumes are odourless and colourless.

WHAT DOES IT INVOLVE?

- A visual inspection of the external appearance of the gas fire to check it meets the correct standards.
- We will fire up the gas fire to check it works as it should and identify and record any faults if found.
- The external casing will be removed to check the main components.
- We will remove and clean the internal parts, and reassemble.
- We will check the flue to make sure it is not leaking any harmful products and carry out a gas flue analyser test.
- We will carry out a gas tightness test to check that the system seals correctly with no leaks.
- Finally to evidence these checks have been carried out we leave you with a Gas Safe Service Certificate
