

ENERGY EFFICIENCY POLICY

In order to protect our planet from potential threats, we use energy efficiently and set targets to reduce our energy consumption.

To achieve this, we:

- Follow national and international standards, laws, and regulations to fulfill both our environmental responsibilities and legal obligations. We voluntarily carry out activities aimed at reducing energy use and/or continuously improving our energy consumption performance, and we monitor the outcomes of these efforts.
- Set targets and include energy efficiency topics in our training programs to ensure the participation of our employees.
- Value collaboration with all stakeholders to create shared goals and outcomes in energy management. We strive to maintain interaction with our guests, employees, visitors, and all business partners to achieve a collective level of awareness and consciousness on this matter.
- Aim to research, procure, and utilize energy-efficient and appropriate products, equipment, tools, and technology alternatives.
- Aim to document our Energy Management System, disseminate it across all departments, update and review it when necessary, and continuously improve it.
- Assess potential emergency situations such as energy risks or energy shortages and plan preventive measures accordingly.
