

PUBLIC TRANSPORT POLICY

Within the framework of sustainable urban transportation policies, we recognize the importance of promoting public transportation. Due to the central location of our hotel, we are within walking distance of metro stations.

In densely populated metropolitan areas, metro systems play a crucial role in sustainable urban mobility — particularly when located on well-planned routes. Considering factors such as per capita energy consumption, greenhouse gas emissions, operating costs, travel time, comfort, safety, security, and punctuality, metro systems are among the most efficient solutions for city transportation.

In this context, **MULA HOTEL** encourages guests to use public transportation, especially given the high traffic density and congestion in our area. To support this, we provide assistance with the **Istanbul Card**, which offers easy access to the city's public transport network.

By guiding our guests toward public transport use, we contribute to reducing individual energy consumption, minimizing greenhouse gas emissions, and supporting broader sustainability efforts.
