e-Library

Key benefits

Complete technical publication solution for highly regulated environments and equipment:

- Easily and quickly configurable to meet publication and approval requirements

- Integrated publication from tlmNexus' platform with significant reduction in manual operations offering a low-cost effective solution

- 24/7 availability with deployed accessibility in the field

- Full end-to-end traceability in support of highly regulated military environments and equipment

- MoD Network compliant for single and multiple user groups

- Hosted on MODNET and is compliant with MoD Network policy and procedures including JSP 440 - Security Standards

- Compliant with MoD documentation standards - ISO 27001 / ISO9001 and BS10008

Secure digital technical publication solution – a trusted source of approved data and information

e-Library provides UK military capability with a fully digitised, fully traceable, cost-effective, secure technical publication solution in support of high tempo and highly regulated environments.

It enables operators, technical and support organisations **immediate** access to the latest **approved** data and information, in a simple and controlled manner, whilst simultaneously enabling multiple viewer groups, such as regulatory authorities, depth maintenance organisations (both military and civilian) and other key defence partners, to receive and download remotely.

Who is behind e-Library?

Since 2008, the team at tlmNexus has been collaborating with Defence Equipment and Support (DE&S) to solve issues using informed consultancy and easy-to-use software.

Our experience of being in the customers' shoes means we understand the vital need for compliance, accountability and transparency when optimising these high-value, and often high-profile, military equipment.

We have now built a trusted software platform which may be used as individual modules or in combinations, to support long-term, complex equipment, from inception and procurement, through the in-service phase, and during the decommissioning phase.

Case Study – Fast Jet

e-Library was developed to replace existing Technical Libraries with a more robust application which could be utilised across the Resolve user base.

One of the drivers for e-Library was a desire to have a single publication portal for all Airworthiness records published from Resolve, namely General Orders and Special Instructions (2(R)1), Repair Instructions (2(R)5), Special Instructions (Technical) (SI(T)) and Service Modifications (SM), as it was previously published to two disparate systems.

Having the information in two places caused confusion amongst the user base, and the decision was made to move to a sole publication portal with feature enhancements.

e-Library has been successfully used as the technical publication solution since 2018 and is available to all tlmNexus application users.

e-Library

Golden thread of information integrity, published via e-Library to the operational users on the front line

High tempo publication to all users
Immediately available
Never using out of date information

Engineering Instructions
Aircrew Publications
Modifications
Engineering Logistics

Government Approved Pricing
Available on G-Cloud (Digital Marketplace)

Compliant with MoD Network policy and procedures including JSP 440 - Security Standards
