

HVAC Buying Guide: How to Choose the Right System

Choosing the right HVAC system is a big decision for homeowners. Whether you're replacing an old unit or upgrading to something more energy efficient, use this guide to help you navigate the process and make the best choice for your home and budget.

- 1 **Measure your home's square footage to determine the correct system size.**
- 2 **Understand the differences between central air, heat pumps, and ductless mini-split systems.**
- 3 **Look for high SEER (Seasonal Energy Efficiency Ratio) and AFUE (Annual Fuel Utilization Efficiency) ratings.**
- 4 **Consider your local climate when choosing heating or cooling power.**
- 5 **Select ENERGY STAR-certified systems to reduce energy bills and environmental impact.**
- 6 **Confirm compatibility with smart thermostats and home automation systems.**
- 7 **Review installation costs, long-term maintenance needs, and available warranties.**
- 8 **Work with a licensed, reputable HVAC contractor to ensure proper sizing and installation.**
- 9 **Ask about current rebates, tax credits, or financing options available for high-efficiency systems.**
- 11 **Think long-term: an efficient system may cost more upfront but will save money over time.**

The right HVAC system makes a big difference. Need expert help? Call Hall's Heating & Air for honest advice and professional installation.
