

Summer HVAC Maintenance Checklist

Before the Texas heat kicks in, it's important to make sure your HVAC system is ready. This checklist will help you keep your home cool, efficient, and stress-free all summer long.

- 1 **Schedule a professional tune-up to inspect, clean, and optimize system performance.**
- 2 **Replace or clean your air filter to improve airflow and energy efficiency.**
- 3 **Set your thermostat to cooling mode and test it for proper operation.**
- 4 **Remove leaves, grass, and debris from around the outdoor unit to ensure clear airflow.**
- 5 **Inspect refrigerant lines for proper insulation and check for leaks.**
- 6 **Clean dust and debris from supply and return vents throughout the house.**
- 7 **Test your system on a warm day to make sure it's cooling as expected.**
- 8 **Seal gaps around windows and doors to prevent cool air from escaping.**
- 9 **Check the condensate drain line and pan for clogs or standing water.**
- 10 **Listen for unusual noises that could indicate worn parts or electrical issues.**

Preventative maintenance now means fewer headaches later.
Call Hall's Heating & Air to schedule your summer system checkup today.
