

GET YOUR BUILDING INSTALLED IN 6 EASY STEPS!

1. REQUEST A QUOTE

To kick off your project, fill out a simple request form to let us know what you're looking for. We'll reach out to verify your requirements and vision so we can put a custom quote together.

2. REFINE YOUR DESIGN

In this engineering phase, you will meet your project manager and work with them to perfect your building's design. This is where the finer details are worked out to ensure the build aligns with your location's requirements and fulfills your needs.

3. DESIGN APPROVAL

Once you're satisfied with the design and give your seal of approval, we generate digital designs for your permit applications while also adding your project to our manufacturing queue.

4. PLACE YOUR ORDER

After you and your dedicated building consultant have fine-tuned the design of your future structure, it's time to sign a purchase order and send deposit payment.

Financing options are available!

5. SECURE YOUR PERMIT

With the plans in hand, visit your local city or county's building department to secure your building permits. Please note this is the sole responsibility of the homeowner / purchaser.

6. DELIVERY - INSTALL

Your building will arrive on a gooseneck trailer and truck, ready for installation. Please ensure our drivers and install team can safely navigate to your job site location and complete the job. Enjoy your new building!
