Furine® Vet Fecal Management System

Clinical Purpose

Furine Vet is a non-invasive fecal management system (FMS) designed to safely divert fecal matter into a collection bag to protect the perianal skin from fecal exposure, maintain hygiene, reduce risk of infection, and improve patient care. The system is applied to the perianal skin of animal patients experiencing diarrhea or fecal incontinence.

Key Benefits

Furine Vet is beneficial for both patients and veterinary staff, as the product:

- Protects the patients perianal skin from diarrhea-related breakdown
- Reduces the risk of patient post-treatment trauma
- Helps minimize cross-contamination
- Enhances patient comfort
- Allows patient mobilization
- Reduces time spent on hygiene-related tasks
- Improves clinical efficiency
- Minimizes odor

ICU User Case: Canine Patient with Uncontrolled Diarrhea

Patient: A 10-year-old Schnauzer was admitted to the veterinary ICU with uncontrolled Diarrhea.

Clinical Problem: The patient could not control defecation whereby liquid feces repeatedly contaminated the perianal skin and tail base with risk of developing moisture-associated dermatitis. The staff had to clean the patient every 30–60 minutes.

Application: The Furine Vet FMS was applied to the perianal skin. The device adhered around the anus and directed feces into the collection bag.

Clinical Benefits: Feces were diverted away from the skin, preventing sore skin, dermatitis, and maceration. The continuous fecal output was contained and measurable. Nursing time spent on repeated cleaning and trips outside for the dog were reduced notably. The patient remained cleaner, drier, and more comfortable.

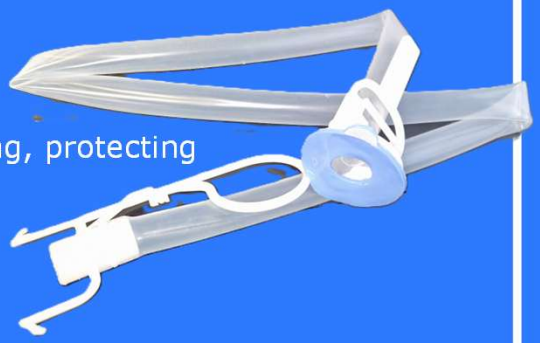

Product Overview

Furine Vet

(ref. V104, V106, V108, V110)

Furine Vet is a non-invasive fecal management system featuring a **dual silicone adhesive system** consisting of:

1. A soft and elastic adhesive base
2. A protective adhesive barrier film

The system diverts liquid stool into a dedicated collection bag, protecting the skin while maintaining a hygienic care environment.

Key features

- 100% silicone-based adhesive technology
- External application to the perianal skin
- Soft, flexible adhesive material to enhance patient comfort
- Hanger with secure locking mechanism
- Available in multiple sizes to accommodate different breeds and animal sizes

Furine Vet Collect

(ref. V205)

Furine Vet Collect is a collection bag designed for use with the Furine Vet FMS.

Key features:

- Opaque material for discreet handling
- Integrated viewing window for monitoring and measuring contents
- Secure closing mechanism to prevent leakage from the bag after use
- High performance charcoal filter allowing air release while containing odor

Securin Vet Skin Barrier

(ref. V305)

Securin Vet Skin Barrier is part of the dual silicone adhesive system used with the Furine Vet FMS. It functions as both a silicone adhesive and protective skin barrier film.

Key features:

- Forms a protective barrier on the skin
- Enhances secure attachment of Furine Vet to the skin
- Skin-friendly silicone based adhesive formulation
- Blue tint for improved visual guidance during application and removal

Securin Adhesive Remover Wipe

(ref. A001)

Securin Adhesive Remover Wipe is a siloxane-based medical cleansing wipe that is designed to prepare the skin prior to application of an adhesive product by removing excess oils. It also functions as an adhesive remover by dissolving and gently removing adhesive residues from the skin.

Key features:

- Functions as skin preparation wipe by removing excess oils from the skin
- Also serves as an adhesive remover wipe
- Gentle and non-stinging formulation
- Free from alcohol, oil, and perfume

Securin Adhesive Remover Spray

(ref. A011)

Securin Adhesive Remover Spray is a siloxane-based, gentle spray designed to support the safe and painless removal of adhesive products from the skin.

Key features:

- Supports gentle and painless removal of adhesive products
- Siloxane-based and sting-free formulation
- Free from alcohol, oil, and perfume
- Directional nozzle for precise application and reduced product waste
- Mechanical pump system – no propellants
