

WOOD COUNTY BOARD OF DEVELOPMENTAL DISABILITIES

Bed Mat with Alarm

The Bed Alarm System is a fall-prevention device designed to help caregivers monitor when someone is trying to get out of bed unassisted. It uses a wireless bed sensor pad placed under a fitted sheet and connects to a handheld pager/monitor that alerts you the moment the person begins to rise. The system is battery-powered, portable, and adjustable with alarm tones or vibration options to suit different environments, and the sensor pad is washable and incontinence-resistant for everyday use. Overall, it provides peace of mind and improved safety by notifying caregivers proactively about potentially risky bed exits.
