

WOOD COUNTY BOARD OF DEVELOPMENTAL DISABILITIES

Finger Guard

Finger guards for cutting are simple kitchen safety tools designed to protect fingers while slicing or chopping food. Typically made of stainless steel or durable plastic, they fit over one or more fingers and act as a barrier between the hand and the knife blade. The curved shield guides the knife while keeping fingertips safely tucked away, helping reduce the risk of cuts. Lightweight, adjustable, and easy to clean, they provide added confidence and safety during food preparation.
