

WOOD COUNTY BOARD OF DEVELOPMENTAL DISABILITIES

Large Keyboard

An adaptive keyboard is a customizable device designed to adjust its layout and functionality based on the user's needs, preferences, or specific tasks. Unlike traditional keyboards, which have fixed keys, adaptive keyboards can dynamically change their keys, labels, or even tactile feedback to suit different applications. Some have bright and high contrast colors to make it easier to navigate. This can improve accessibility for individuals, enhance productivity for specialized tasks, and offer a more intuitive user experience for various contexts.
