

WOOD COUNTY BOARD OF DEVELOPMENTAL DISABILITIES

Phone Charging Pad

A phone charging pad is a wireless charging device that powers a smartphone without the need for plugging in a cable. Most charging pads have a slim, compact design and include features such as non-slip surfaces, indicator lights, and built-in safety protections to prevent overheating or overcharging. They are convenient for desks, nightstands, and shared spaces, reducing cord clutter and simplifying daily charging. Phone charging pads are especially helpful for individuals who have difficulty manipulating small charging cables or ports, offering an easy “place and charge” solution.
