

FIRE DAMPER INSPECTION & REMEDIAL WORKS

EXTRACTING THE PROBLEM. SUPPLYING THE SOLUTION.

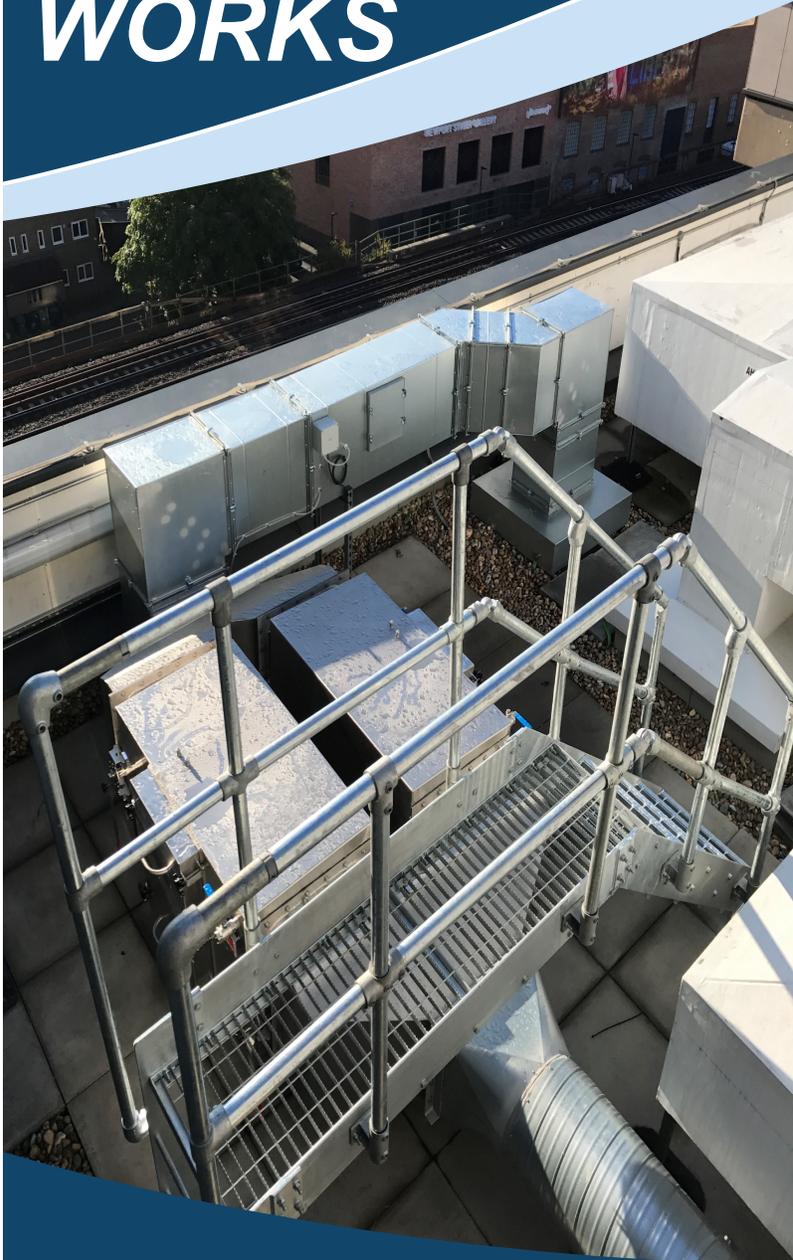

Sector	Commercial & Industrial
Task	To bring existing faulty or non-compliant Fire dampers up to the current required standards/ specification

A faulty fire damper will not prevent the spread of fire and it is compulsory that these are tested annually by law to ensure the safety of the building occupants.

Nitor Ventilation have vast amounts of experience in working with fire dampers, ensuring they are working as designed and are compliant.

From initial survey, inspection and installation to annual testing and maintenance/remedial works Nitor can manage the whole process ensuring your compliance with the necessary regulations.

Nitor Ventilation have all the necessary skills and experience in house to bring the fire dampers up to the correct specification. Any repairs, replacements or remedial works required to fire dampers, including but not limited to, replacement of existing dampers, new links installation and fire stopping repair works.

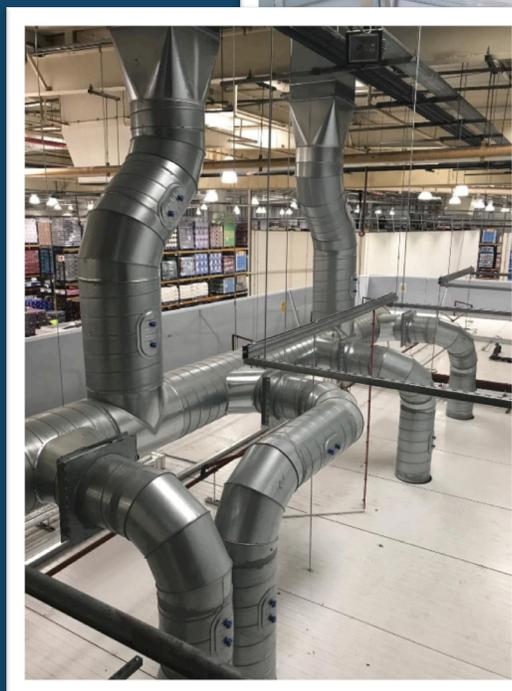

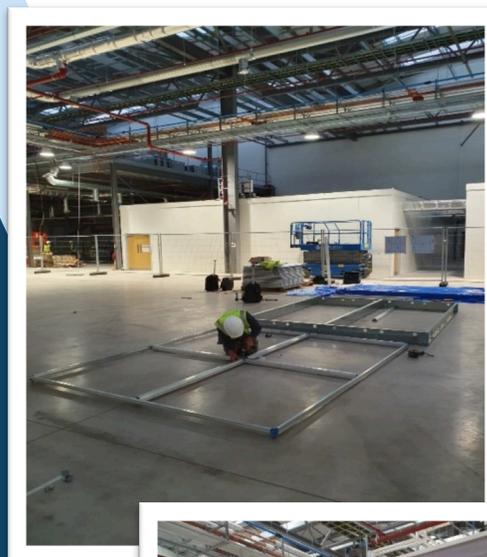

FIRE DAMPER INSPECTION, TESTING & REPAIR & REMEDIAL WORKS

Nitor Ventilation provide the complete package to clients which includes:

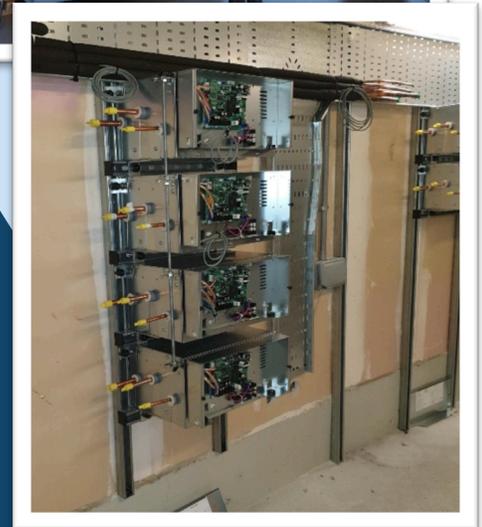

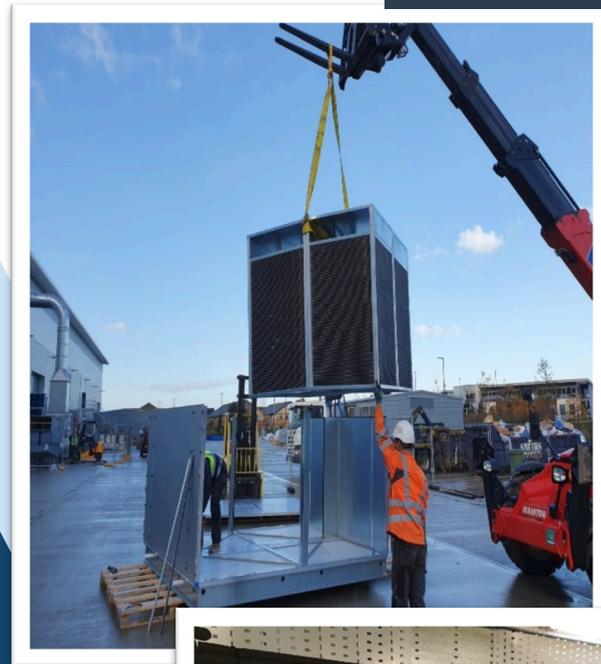

- Initial Survey/meeting with client
- Carryout fire damper drop testing in line with BS9999 Standards
- Produce a thorough report on each damper detailing our findings/drop test result
- Provide a proposal for all repair/remedial works required to each damper
- Carryout all remedial works required to bring the fire damper up to full working condition
- Produce a final report on completion of repairs/remedials

We also work as a trusted subcontractor under a number of other fire damper testing and ventilation hygiene companies. Nitor Ventilation prides itself on giving a superior service to all our clients, maintaining our high-level reputation and the reputation of those we subcontract for. This gives clients the confidence to use our services time and time again.
