

KITCHEN VENTILATION

EXTRACTING THE PROBLEM. SUPPLYING THE SOLUTION.

Sector Commercial & Industrial

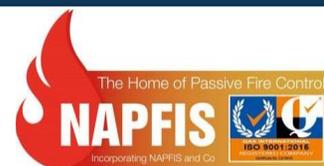

Task Design, Manufacture and Supply

Compliant Kitchen Ventilation Systems to the latest Standards.

Nitor Ventilation has vast amounts of experience installing either new or rectifying existing kitchen ventilation systems, ensuring they are working as designed and are compliant with the latest regulations

From initial survey and installation right through to maintenance Nitor can manage the whole process ensuring your compliance with the necessary regulations.

Nitor Ventilation have all the necessary skills and experience in house to create an effective kitchen ventilation system to the desired and required specification of the client.

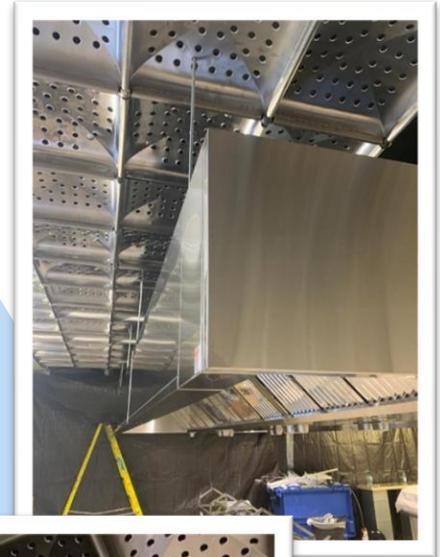

KITCHEN VENTILATION

Nitor Ventilation provide the complete package to clients which includes:

- Initial Survey/meeting with client
- Design of kitchen ventilation system ensuring product efficiencies, compliance and the latest in air filtration technology
- On-site installation
- Commissioning on completion of product installation

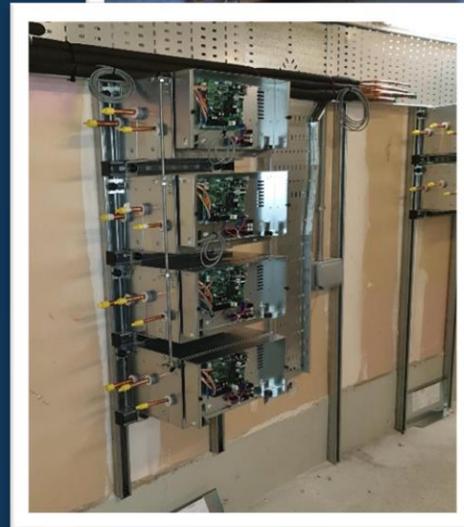

Nitor Ventilation prides itself on giving a superior service to all our clients, maintaining our high-level reputation and the reputation of those we subcontract for. This gives clients the confidence to use our services time and time again.

We have worked on numerous kitchen ventilation projects services including the assessment of existing systems and advising on grease and odour control. We help our clients to create a system which is fully functional whilst still being affordable, attractive and high quality. Whether you require a canopy, a hood or a fully integrated or standalone system we can provide this for you.
