

BLADES THAT KEEP YOU MOWING

LOW LIFT

- For shallow decks and most consumer mowing applications.
- Helps reduce blowout or deck packing in some conditions.

MEDIUM LIFT

- Helps provide additional vacuum for consumer decks.

HIGH LIFT

- Standard blade for many deep decks.
- Provides more vacuum for better finished appearance.

EXTRA HIGH LIFT

- Provides lift required for high velocity style decks.

CATCHING

- The blade generates the energy required to transfer the grass into bagging systems where there is no external blower.

WAVY MULCHING

- Positive and a negative lift agitates the grass and helps reduce clipping size.
- Primarily for decks with mulching kits installed.

MULCHING

- Multiple cutting edges are effective in reducing the volume of dry leaves in fall cleanup.
