

Greenbrook TMS Patient Journey

HOW WE CAN HELP

Transcranial Magnetic Stimulation (TMS) is an FDA-cleared, non-invasive therapy for the treatment of Major Depressive Disorder (MDD) & Obsessive-Compulsive Disorder in patients that have failed drug treatments or have not reached full remission from symptoms.

1 No-Cost Consultation

Meeting with a Patient Consultant to learn about the TMS therapy treatment process and start insurance paperwork if needed

2 Pre-Assessment

Office visit with a psychiatrist at Greenbrook TMS to evaluate whether TMS is right for your patient

3 Motor Threshold

A psychiatrist at Greenbrook TMS identifies the precise areas of the brain associated with depression, and establishes your patient's unique treatment settings

4 TMS Treatment

- Daily 20-40m sessions
- During treatment, patient can watch TV, read, use their phone
- Patients typically feel an improvement within 3 to 4 weeks

5 Post-Treatment Office Visit

Based on their results, your patient's TMS provider will make recommendations for further care to you and your patient

We keep you informed throughout the patient's journey.

- ✓ Tremendous efficacy and safety profile validated through multiple studies
- ✓ Dedicated Care team with 24/7 access to Clinical Advisory Committee, including Chief Medical Officer
- ✓ We handle all aspects of your patient's TMS treatment experiences, including insurance authorizations
- ✓ Reimbursement in all 50 states from all major insurers
