

TRELLIS SECURITY BARRIER

The Trellis Security Barrier is completely trackless. It is suitable for barrier access for shopping malls, factory units, car parks, loading docks, function centres, warehouses, sporting facilities, crowd control and partitioning.

Why should I choose the Trellis Security Barrier for my business?

Unobtrusive

The Trellis Security Barrier can be removed from where it is being used, wheeled away and stored almost anywhere.

Strength

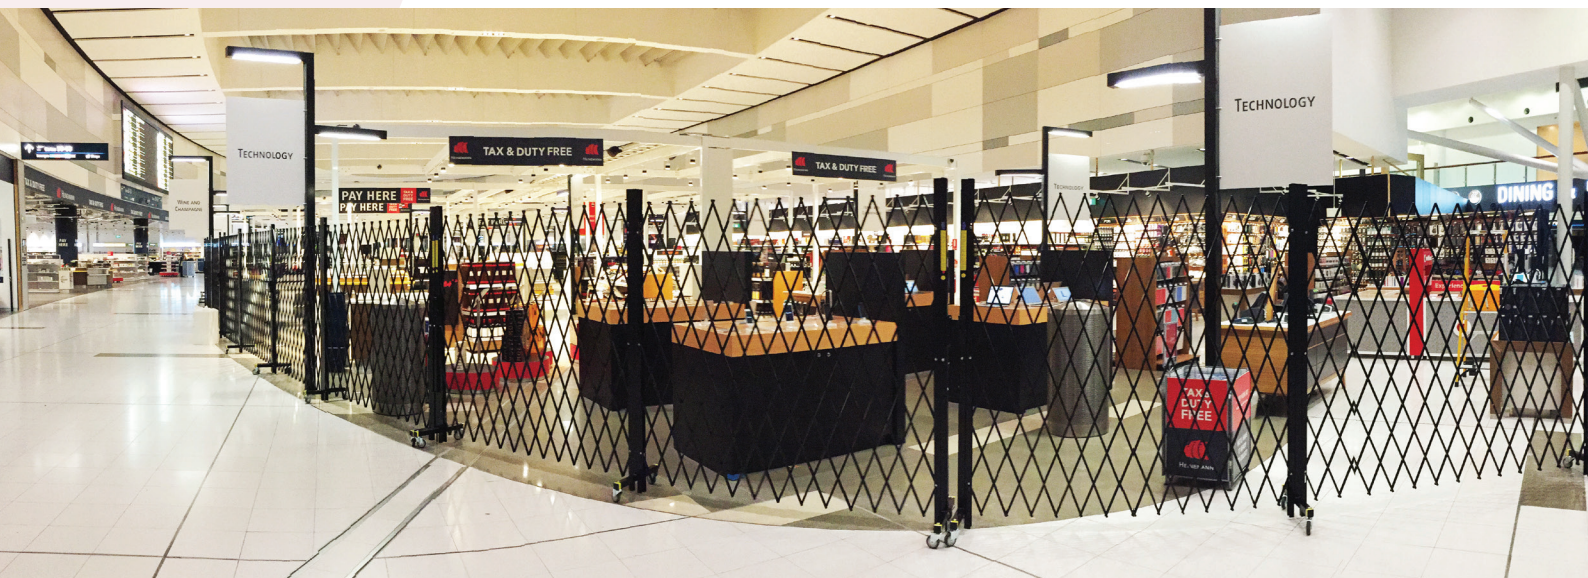

Shootbolt locking to the floor at the base of each trolley provides extra stability and security. In addition, a removeable lockable bollard can be used for high security.

Flexibility

The Trellis Security Barrier operates on a series of steel reinforced trolleys & can be completely mobile. The system can span any width and can be made to a maximum height of 2½ metres. As an alternative to a completely mobile unit, the Trellis Security Barrier can pivot or rotate up to 270° so as not to restrict clear opening width. A curved configuration is also available. A Handling trolley is also available.

Long Lasting

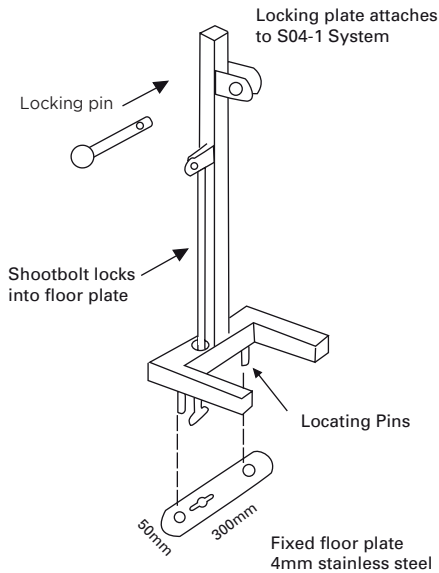

The Trellis Security Barrier has been treated, epoxy powdercoated and galvanised against corrosion.

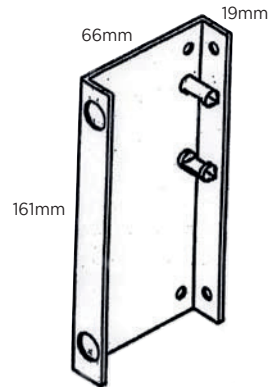

MOBILE TRACKLESS TRELLIS
