With LI 700, you get more from your pesticide investment. LI 700 is a non-ionic penetrating surfactant designed to enhance the performance and reliability of foliar applications.

With LECI-TECH™ technology, LI 700 helps sprayer operators better manage their application risk for a higher return on their investment:

- 💧 **Adhesion** - droplets stick to the leaf surface
- 💧 **Coverage** - spray droplets spread out on the leaf (better pesticide dispersion)
- 💧 **Penetration** - superior penetration of waxy leaf cuticle
- 💧 **Droplet Management** - produces a more uniform droplet size distribution for reduced drift
- 💧 **pH Reduction** - prevents alkaline hydrolysis of many pesticides including glyphosate that could otherwise impact performance
- 💧 **Crop Safety** - better crop health due to less cell wall disruption of plant surfaces
