

CLEMONS CONCRETE COATINGS

SUPER COLOR

Decorative Color For Exterior Concrete

SUPER COLOR transforms exterior plain concrete into attractive decorative concrete without the harsh chemicals, tedious process, and expense of acid staining.

SUPER COLOR is a concentrated stain that dilutes in acetone. Beginning with a properly prepared surface, these stains can be applied and sealed in as little as one day, minimizing down-time. The semi-transparent properties allow the variations in the substrate to enhance the final look.

Choose from 16 stock colors or faux finishing multiple colors to create your own unique effect.
