# Table of Contents

Esri resources for your organization

## Course introduction

- Course introduction
- Course goals
- Installing the course data
- Training Services account credentials
- Icons used in this workbook

## 1 Building a foundation for spatial analysis

- Lesson introduction
- What is spatial analysis?
- Benefits of spatial analysis
- Common analysis problems
- Spatial analysis types
- Spatial analysis workflow
- Applying spatial analysis
- Lesson review
- Answers to lesson 1 questions

## 2 Planning and preparing for spatial analysis

- Lesson introduction
- Data properties
- Raster data considerations
- Environment settings
- Exercise 2: Prepare data for analysis
  - Set up an ArcGIS Pro project
  - Identify the coordinate system of a feature class
  - Change the coordinate system for a feature class
  - Change the coordinate system of the map
  - Create a feature class from x,y coordinates
  - Enhance data using a table join
  - Import a map file for a different study area
  - Extract features using the Clip tool
  - Extract raster data using a mask
- Lesson review

Answers to lesson 2 questions

### 3 Proximity analysis

Lesson introduction

Using proximity in everyday life

Choosing the best distance measure

Ways to measure distance

Outputs of proximity analysis

Buffering using different distance measures

Measuring cost

Exercise 3: Analyze proximity

- Prepare the project

- Select features based on distance

- Create proximity zones

- Modify the output extent

- Determine the closest store to each customer

- Add a field

- Calculate a field

- Create desire lines

- Create a Service Area layer

- Create drive-time polygons

- Create a distance surface

Lesson review

Answers to lesson 3 questions

### 4 Overlay analysis

Lesson introduction

Introducing overlay

How overlay works

Working with overlay tools

Choosing the appropriate tool

Exercise 4: Perform overlay analysis

- Make selections based on location

- Overlay two layers using the Pairwise Intersect tool

- Create new desire lines

- Overlay two layers using the Identity tool

- Remove point features from a polygon

- Summarize the length of line features within a polygon

- Calculate the area of a specific attribute within a polygon

Lesson review

Answers to lesson 4 questions

## 5 Automating spatial analysis

Lesson introduction

Automating workflows

Automation methods in ArcGIS Pro

Batch geoprocessing

Exercise 5A: Build a model

- Prepare ArcGIS Pro

- Create a model

- Add the XY Table To Point tool

- Add the Near tool

- Add the Select Layer By Attribute tool

- Add the Generate Origin-Destination Links tool

- Run the model

Automating models

Exercise 5B: Use a model to process multiple inputs

- Prepare ArcGIS Pro

- Make a copy of a model

- Add an iterator to a model

- Modify an iterator

- Set model parameters for the Desire Line tool

- Set model parameters for the XY Table To Point tool

- Change model element labels

Lesson review

Answers to lesson 5 questions

## 6 Creating surfaces using interpolation

Lesson introduction

Tobler's First Law of Geography

What is interpolation?

Types of interpolation

Interpolation methods

Deterministic interpolation

Exercise 6: Interpolate surfaces

- Examine data

- Set geoprocessing environments

- Interpolate using the Natural Neighbor tool

- Interpolate using the Spline tool

- Interpolate using inverse distance weighted interpolation

- Examine interpolated values

Lesson review

Answers to lesson 6 questions

## 7 Suitability modeling

Lesson introduction

What is suitability modeling?

Suitability modeling workflow

When to use raster analysis

Deriving surfaces from other sources

Raster functions and geoprocessing tools

Levels of measurement

Transforming values to a common scale

Types of raster overlay

Exercise 7A: Use raster overlay tools in a suitability analysis workflow

- Prepare a project

- Create an aspect layer

- Run binary overlay

- Inspect a model

- Run the model

Raster overlay tools

Locating and analyzing results

Exercise 7B: Perform suitability modeling

- Prepare a project

- Create a new suitability analysis

- Reclassify a raster layer

- Transform derived surfaces

- View results

- Create suitable regions

Lesson review

Answers to lesson 7 questions

## 8 Spatial statistics

Lesson introduction

Spatial patterns

What are spatial statistics?

Types of spatial statistics

Interpreting inferential statistics

Descriptive versus inferential

Spatial statistics tools

Clusters and outliers

Clustering tools

Exercise 8A: Use spatial statistics to explore data

- Prepare ArcGIS Pro

- Locate directional trends in data
- Run the Average Nearest Neighbor tool
- Run the Spatial Autocorrelation tool
- Run the Hot Spot Analysis (Getis-Ord Gi\*) tool
- Create a density surface

Exercise 8B: Perform clustering and outlier analysis

- Prepare the project
- Perform density-based clustering
- Perform optimized hot spot analysis
- Perform optimized outlier analysis

Lesson review

Answers to lesson 8 questions

## 9 Space-time analysis

Lesson introduction

Incorporating time into your analysis

Temporal analysis

Exercise 9A: Explore data

- Explore data attributes
- Create a line chart
- Create a data clock chart
- Create a calendar heat chart

Space-time analysis

Emerging hot spot analysis

Space-time analysis workflow

Exercise 9B: Explore space-time pattern mining tools

- Create a space-time cube
- Run the Emerging Hot Spot Analysis tool
- Visualize a space-time cube in 3D

Lesson review

Answers to lesson 9 questions

## 10 Regression analysis

Lesson introduction

Explaining spatial patterns

Causes of spatial patterns

What is regression?

Regression equation

OLS regression

Checkpoint

Six OLS checks

OLS reports

Exploratory regression

Exercise 10: Find a properly specified regression model

- Set up ArcGIS Pro

- Perform exploratory data analysis

- Use the Generalized Linear Regression tool

- Evaluate the spatial output from the GLR tool

- Create a scatter plot matrix

- Run the GLR tool on multiple dependent variables

- Perform OLS checks

Enriching data for analysis

Lesson review

Answers to lesson 10 questions

## 11 Geographically weighted regression

Lesson introduction

How relationships change over space

Geographically weighted regression characteristics

When to use GWR

GWR in action

Exercise 11: Perform GWR

- Run GWR using a properly specified OLS model

- Map coefficients to see variation over space

- Predict using GWR

Lesson review

Answers to lesson 11 questions

## 12 Geostatistical interpolation

Lesson introduction

Deterministic interpolation

Geostatistical interpolation

Geostatistical interpolation workflow

Examine the Geostatistical Analyst Interpolation toolset

Approaches to geostatistical interpolation

Exercise 12: Perform exploratory interpolation

- Set up the ArcGIS Pro project

- Explore the data distribution

- Perform exploratory interpolation analysis

- Review interpolation method rankings

- Review cross validation statistics

- Examine a predicted surface

The Geostatistical Wizard

Lesson review

Answers to lesson 12 questions

## 13 3D analysis

Lesson introduction

When to use 3D analysis

3D analysis examples

Voxel layers

Exercise 13: Perform 3D analysis

- Set up the project

- Create sight lines

- Perform line-of-sight analysis

- Create a 3D buffer

- Intersect 3D features

Lesson review

Answers to lesson 13 questions

## Appendices

Appendix A: Esri data license agreement

Appendix B: Answers to lesson review questions

Appendix C: Additional resources
