Esri resources for your organization

Course introduction

Course introduction
Course goals
Installing the course data
Icons used in this workbook

1 Building a foundation for spatial analysis

Lesson introduction
What is spatial analysis?
Benefits of spatial analysis
Spatial analysis questions
Spatial analysis types
Spatial analysis workflow
Applying spatial analysis
Lesson review
Answers to lesson 1 questions

2 Planning and preparing for spatial analysis

Lesson introduction
Data properties
Raster data considerations
Exercise 2A: Prepare data for analysis
- Set up an ArcGIS Pro project
- Identify the coordinate system of a feature class
- Change the coordinate system of a feature class
- Change the coordinate system of the map
- Create a feature class from x,y coordinates
- Enhance data using a table join

Visualizing charts

Exercise 2B: Create a subset of data
Import a map file
Extract features using the Clip tool
Create a chart
Extract raster data using a mask
Lesson review
Answers to lesson 2 questions

3 Proximity analysis

Lesson introduction
Using proximity in everyday life
Distance measurement methods
Choosing the best distance measurement
Outputs of proximity analysis
Buffering using different distance measures
Measuring distance using cost
Exercise 3: Analyze proximity
Prepare the project
Select features based on distance
Create proximity zones
Modify the output extent
Determine the closest store to each customer
Add a field
Calculate a field
Create desire lines
Create a Service Area layer
Create drive-time polygons
Create a distance surface
Lesson review
Answers to lesson 3 questions

4 Overlay analysis

Lesson introduction
How overlay works
Overlay output

Working with overlay tools
Choosing the appropriate tool
Exercise 4A: Locate new customers using overlay analysis
Make selections based on location
Overlay two layers using the Pairwise Intersect tool
Create new desire lines
Overlay two layers using the Identity tool
Remove point features from a polygon
Exercise 4B: Calculate attributes using overlay analysis
Summarize line features length within a polygon
Create a chart
Calculate the area of specific attributes within a polygon
Lesson review
Answers to lesson 4 questions

5 Automating spatial analysis

Lesson introduction
Automating workflows
Automation methods in ArcGIS Pro
Batch geoprocessing
Exercise 5A: Automate a spatial analysis workflow with a model
Prepare ArcGIS Pro
Create a model
Add the XY Table To Point tool
Add the Near tool
Add the Select Layer By Attribute tool
Add the Generate Origin-Destination Links tool
Run the model
Automating models
Exercise 5B: Use a model to process multiple inputs
Prepare ArcGIS Pro
Make a copy of a model
Add an iterator to a model
Modify an iterator
Set model parameters for the Desire Line tool

Set model parameters for the XY Table to Point tool
Change model element labels
Lesson review
Answers to lesson 5 questions

6 Creating surfaces using interpolation

Lesson introduction
Tobler's first law of geography
What is interpolation?
Types of interpolation
Interpolation methods
Deterministic interpolation
Exercise 6: Interpolate surfaces
Examine data
Set geoprocessing environments
Interpolate using the Natural Neighbor tool
Interpolate using the Spline tool
Interpolate using inverse distance weighted interpolation
Examine interpolated values
Lesson review
Answers to lesson 6 questions

7 Suitability modeling

Lesson introduction
What is suitability modeling?
Suitability modeling workflow
When to use raster analysis
Deriving surfaces from other sources
Raster functions and geoprocessing tools
Levels of measurement
Transforming values to a common scale
Raster overlay approaches
Exercise 7A: Use raster overlay tools in a suitability analysis workflow
Prepare a project
Create an aspect layer

Run binary overlay
Inspect a model
Run the model
Interactive suitability modeling
Locating suitable areas
Exercise 7B: Perform suitability modeling
Prepare a project
Create a new suitability analysis
Reclassify a raster layer
Transform derived surfaces
View results
Create suitable regions
Lesson review
Answers to lesson 7 questions

8 Spatial statistics

Lesson introduction
Spatial patterns
What are spatial statistics?
Types of spatial statistics
Interpreting inferential statistics
Descriptive statistics versus inferential statistics
Characterizing spatial patterns
Hot spot analysis
Exercise 8: Use spatial statistics to explore data
Prepare ArcGIS Pro
Locate directional trends in data
Run the Average Nearest Neighbor tool
Run the Spatial Autocorrelation tool
Run the Hot Spot Analysis (Getis-Ord Gi*) tool
Create a density surface
Lesson review

Answers to lesson 8 questions

Appendices

Appendix A: Data license agreement
Appendix B: Answers to lesson review questions
Appendix C: Additional resources
Appendix D: Lesson stories
