

Your AV Called — It Wants an Upgrade

Traditional antivirus (AV) solutions were designed for a different era—one where signature-based detection kept pace with known threats. Today's threat landscape has evolved beyond that model. Fileless attacks, living-off-the-land tactics, and AI automated ransomware require an adaptive, intelligent approach to endpoint security. If your organization relies on legacy AV, it is not a matter of if—but **when**—it will be outpaced.

As a starting point, SentinelOne establishes a strong foundation that continuously monitors system activity, identifies malicious patterns in real time, and autonomously responds to threats by delivering a modern endpoint protection platform built on behavioral AI rather than static signatures, visibility rather than guessing, automated remediation rather than manual intervention, and rollback capabilities. It transforms endpoint protection from reactive defense into proactive threat hunting.

While SentinelOne provides a strong baseline, organizations seeking full protection must look beyond simple endpoint detection. Capture Client Premium extends these capabilities to a unified security platform, delivering advanced threat protection, DNS-layer filtering, and network-level intelligence.

This upgrade introduces layered defense. It blocks threats before they reach the endpoint, detects anomalies in real time, and enforces policy across users and devices. Key benefits include proactively preventing breaches, quickly identifying risks, and consistently applying safeguards. This produces a more resilient security posture that reduces risk across the entire attack surface, not just at endpoints.

Beyond Tools: Visualize Expert SOC Monitoring

Technology alone does not stop threats—timely, informed action does. Even the most advanced endpoint protection platforms generate alerts, surface anomalies, and require interpretation in the context of real-world attack patterns. Without continuous oversight, critical signals can be missed, misclassified, or delayed, increasing the risk of escalation.

Capture Client Premium closes this gap by pairing advanced endpoint protection with a dedicated Security Operations Center (SOC) from Sonicwall's award-winning SonicSentry team.

This is not passive alerting--it is active, continuous monitoring by trained security analysts who validate, investigate, and respond to threats in real time. This approach delivers immediate threat

mitigation, reduces risk, and ensures critical assets remain secure. Every protected device is under constant watch. Suspicious behavior is promptly detected and swiftly addressed, minimizing potential impact.

This model eliminates the operational burden placed on internal IT teams. Instead of relying on generalist staff or non-specialized support structures, organizations gain access to or support from experienced security professionals who understand attacker behavior, threat intelligence, and incident response workflows. The result is faster containment, reduced false positives, and more effective remediation.

Additionally, SOC-backed monitoring enhances visibility across the environment. Analysts correlate endpoint activity with network signals, emerging threat intelligence, and behavioral trends, providing a broader and more accurate picture of risk. This level of insight is difficult to achieve solely through tools and is critical for defending against sophisticated, multi-stage attacks.

In short, the upgrade is not just about better technology—it is about ensuring that technology is continuously and intelligently leveraged. With SOC oversight, endpoint protection becomes proactive, adaptive, and aligned with the realities of modern cyber threats.

The Bottom Line

Legacy antivirus is **no longer sufficient** against modern threats. Starting with SentinelOne is a critical first step toward intelligent endpoint protection.

Upgrading to Capture Client Premium adds layered defense, visibility, and expert oversight. These are required to stay ahead of today's attackers. Organizations relying on outdated AV accept unnecessary risk—while those who upgrade are actively taking control of their security future.

Your AV already knows it's behind. Is your organization ready to move forward?

Upgrade to modern endpoint protection now. Close the gap before attackers exploit it. Reach out to us when you are ready. We are your Security Partner.
