For that extra edge.

RISK,CRISIS AND CYBERSECURITY MANAGEMENT

Assessing and planning for risks, crises and cybersecurity incidents are an essential process for all organisations to embrace in today's business climate. Like insurance, you don't want to have to claim, but if you need a risk or crisis management plan, you're covered.

Ron Browne, Managing Consultant at Extrapreneur Services adds invaluable external expertise, insight and knowledge gained over a wide spectrum of industries in a career spanning more than 40 years in business.

Reviewing risk, inclusive of a major crisis or cybersecurity incident, is a crucial step towards readiness to respond if and when things go awry. Based on ISO31000 framework, Ron can guide you through the process of assessing risk, implementing mitigation strategies and preparing for the worst eventualities that can detrimentally impact your business.

Risk, Crisis and Cybersecurity Management

Boards and management need to decide their Risk Attitude, Risk Appetite, Risk Capacity and Risk Tolerance before they embark on developing an organisational management plan.

We can provide a bespoke service to review your operations, identify potential risks and then draft a risk, crisis and cybersecurity management policies, procedures and plan to implement in your organisation.

Alternately we can supply a template for your organisation to draft your own policies, procedures and plan, then provide an Audit Review of your documents when in final draft stage.
