

GPS Run/Hold Sensor for Round Balers (Part #190050)

- ▶ **Uses GPS Signal (reciever included) to turn your applicator on/off with the movement of your tractor***

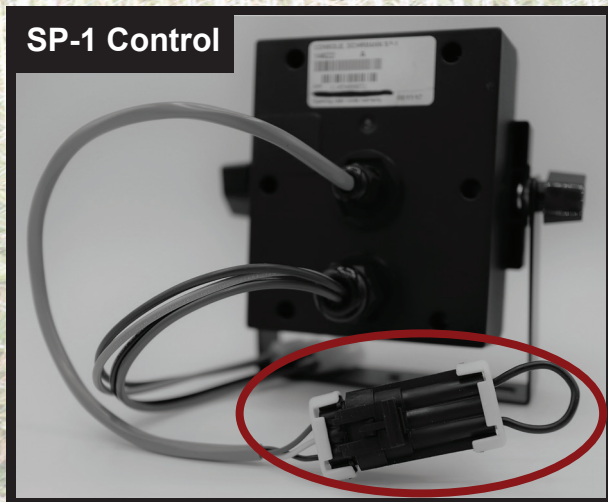

When the **tractor is stopped**, the applicator will be **placed into Hold**, and when the **tractor is moving**, the applicator will be **placed into Run**

- ▶ **Quick & Easy Installation**

GPS Reciever has a **built-in magnetic mount**, or can be installed with double sided foam tape (included)

- ▶ **Save \$\$\$ on wasted preservative by not applying product while you are wrapping and ejecting your bales**

- ▶ **No longer having to worry about turning your applicator back on, after you turn it off to wrap & eject, assuring all of your bales have preservative applied**

- ▶ **Plug and Play for New and Existing Ag-Serv Round Baler Systems**

For Existing Ag-Serv Application Systems, it **must** have our **SP-1 Control with the Run/Hold Input**

- ▶ **3 year warranty**

*Turning around at the end of a row, will **NOT** place your system into Hold as you are still moving. If you turn the SP-1 switch **OFF** please note that there is a slight delay before the unit will re-acquire signal and activate-due to this, we recommend turning the switch back to **ON** prior to picking up hay compensating for the delay.
