

Carrymate Transport Grips

Carrymate Transport Grips are designed to reduce the effort and risk of injury associated with lifting and carrying glass and windows. The unique cam and rubber bearers grip the glass or window, and as the weight load increases they increase their grip. The parallel design of the cams ensures that double glaze units (DGUs or IGUs) are squeezed on their spacer bar, reducing the likelihood of glass damage.

- Suitable for lifting single glaze, double glaze, windows, and other flat panel products
- Carrymates grip from 1mm to 80mm thicknesses
- Ergonomic handle for ease of use
- Rated for 100kgs of lift per unit
- Supplied as a pair
- Allows users to set their lift height, keep their body and arms straight, and avoid lifting fatigue and injuries
- Frees a hand for opening doors etc
- Keeps the carrier away from the load (health and safety)
- See www.theglassrackingcompany.com for other glass and window factory and site lifting solutions
