

DGU Heat Glass Displays

Our DGU heat glass displays are designed to demonstrate the thermal qualities of various glass options such as single glaze, double glaze, and double glaze with Argon gas. With the high-end timber units the customer places their hand on the glass pane, which completes a circuit and automatically turns on a heat lamp. With the budget powdercoated version the lamps are turned on with a button.

- The glass sample size is around 300mm square
- Height is around 1000mm
- The timber units have a veneer finish and attractive fabricated brushed stainless steel top
- The powdercoated units are folded design and powdercoated for appearance and longevity. These units suit branding.
- Timber or powdercoated finish
- Designed and fabricated here in Australasia
- See www.theglassrackingcompany.com for other glass display solutions
