

Swing Racks

Swing racks are designed for space efficient storage of job lots of glass, and provide quick and safe access to specific items. The leaves are engineered to swing easily with little effort from the user, despite the glass weight. Leaf sizes and load carrying are designed specifically for each user application. Swing racks take around half the floor space of traditional A-frame storage systems.

- L-frame leaves for sitting glass and windows on
- Metalcraft non-marking polymer rear bearing surface
- Hinged structure designed to be freestanding
- Glass and window can be loaded and unloaded from the front and above
- Optional mezzanine floor above for additional factory storage space
- Welded construction
- Painted finish
- Designed and fabricated here in Australasia
- See www.theglassrackingcompany.com for other glass and window factory storage options
