

Castors

Our castors and locking feet are designed for the weight and floor types typical of the glass and window industry. These castors are rated at 460kgs each, and have a 150mm diameter wheel with a hard plastic tyre suited to rolling over shelled glass and aluminium / PVC swarf. The castors have a grease nipple on the axle and the ball bearing swivel. The castor brake is a push down mechanism. The locking feet are designed for fixing a castored trolley and are usually positioned to lift the trolley off its castors (commonly used on harp trolleys).

- 150mm diameter castors
- 200mm from the fixing plate to the bottom of the castor wheel
- Rated for 460kgs of load each
- Long life product due to quality design and manufacture, and dual grease nipples to protect the bearings
- Tyre is suited to typical glass and window factory environments where shelled glass and swarf commonly litter the floor
- Stocked in bulk here in Australasia
- Designed and fabricated here in Australasia
- See www.theglassrackingcompany.com for other glass and window factory solutions
