

LASER THERAPY HAS ARRIVED AT GRANGE VETS!

Luco looking cool in his "doggles"

What is Laser Therapy?

A scientifically proven way to reduce your pet's pain and inflammation

Photobiomodulation, commonly called laser therapy, targets your pet's damaged cells and help them regenerate faster. Much like sunlight helps a plant produce energy, laser therapy helps energize your pet's cells.

This drug-free, side-effect free treatment can be used as an adjunct to your pet's prescribed treatment plan

TREATMENTS ARE.....

FUN...Cool Looking Eye Protection

Your pet, you, and the vet nurse delivering the treatment will all wear eye protection during the treatment. Make sure you snap a picture of your pet in their "doggles"!

TREATMENT....Short, On Average 3-7 Minutes Long

A hand-piece is passed over your pet's injury. Depending on your pet's condition, a contact or non-contact applicator will be used. There is no clipping or shaving of fur.

PET EXPERIENCE....Pain –Free, Gentle Warmth

Your pet will feel a gentle soothing warmth as their pain is eased. Most pets are very relaxed during treatments, some even fall asleep.

**IF YOU THINK YOUR PET MIGHT BENEFIT FROM
LASER THERAPY PLEASE SPEAK TO YOUR VET**
