

Hygiene Group operate the Reach & Wash System to clean hard to reach windows from the ground.

This method is the safest way to clean your windows and makes buckets and squeegees a thing of the past.

We believe this ladder-less method is the answer to the risk associated with traditional window cleaning. Health and safety is of paramount importance in the workplace so with ladders and high access equipment eliminated, companies are assured knowing that accidents simply cannot happen.

- Nightly deep cleans
- Daytime and weekend cover
- ISO 9001:2015
- ISO 14001:2015
- Over 35 years' experience
- Innovative technology
- Specialised teams available:
 - confined space
 - high level
 - plant cleaning

Hygiene Group Managing Director Gurdip Bir said;
"Reach & Wash pushes dirt away aggressively using almost 100% pure water, leaving glass, window frames, cladding and signs clean without the need for chemicals and detergents."

It's environmentally friendly too. The cleaning action uses pure water resulting in excellent cleaning results. Surfaces that are cleaned using pure water dries to spot free finish leaving no marks behind.

The water fed poles can reach up to 80 feet, well beyond the reach of ladders, and is much safer, efficient and cost effective than other methods of working at height, so are ideal for high rise office windows, glass roofs, cladding, canopies and atria.

Hygiene Group is the industry-acknowledged market leader, and continues to develop as the number one specialist cleaning and hygiene services provider to the food manufacturing and processing industry.
