

## Charcroft partner Euroquartz announces cleanroom installation

**Charcroft's Electronics' franchised partner, frequency control specialist Euroquartz, has completed installation of a new class 7 cleanroom facility at the company's Somerset headquarters.**

The investment is designed to ensure UK defence contractors can fulfil their requirements for surface mount device (SMD) oscillators. Charcroft covers the full range of Euroquartz products with a UK distribution franchise agreement. The addition of the new class 7 cleanroom will allow Charcroft to further support military and aerospace customers and enable its product specialists to offer a more complete solution for space, aerospace and defence systems.

The new cleanroom facility is currently being commissioned with an expectation of adding a

new range of SMD oscillators to its current range of through-hole products before the end of the year. Existing UK manufactured products will also benefit from the cleanroom environment and the company anticipates improved quality for its UK production for the foreseeable future. The ambition is for Euroquartz to offer high-quality UK manufactured products to the aerospace industry, free from all ITAR restrictions.

Debbie Rowland (pictured), director, Charcroft Electronics stated: "This significant investment is designed to ensure that Euroquartz continues to play a critical role in the UK manufacture of oscillator products for military and aerospace applications and ensure that UK defence contractors can fulfil their requirements for surface mount device oscillators."
