INTRODUCTION

Vishay Foil Resistors (VFR) introduces a new line of Ultra Precision Bulk Metal® Z1 Foil Technology: wraparound surface mount chip resistors with gold-plated terminals for high temperature up to +225°C⁽¹⁾ (working power: to 300 mW at +200°C).

The FRSG series incorporates Z1 Foil Technology to extend its critical performance features to high-temperature environments, while maintaining the same low TCR. The gold-plated terminals support the use of popular mounting methods used in the industry, therefore, facilitating any design considerations required.

The FRSG is available in any value within the specified resistance range. VFR's application engineering department is available to advise and make recommendations. For non-standard technical requirements and special applications, please contact foil@vpgsensors.com.

 (conceptual illustration)

Note

To acquire a precision resistance value, the Bulk Metal Foil chip is trimmed by selectively removing built-in “shorting bars.” To increase the resistance in known increments, marked areas are cut, producing progressively smaller increases in resistance. This method reduces the effect of “hot spots” and improves the long-term stability of VFR resistors.
