Lexington Entry Systems

Lexington Entry Systems pre-hangs steel, smooth fiberglass, textured fiberglass, and wood door panels using high-quality components. Units include premium frame, sill, weatherstripping, glass, and configuration options. Please see your dealer for available specifications and upgrades.

Continuous Head, Sill and Mull System

Utilizing a continuous head, sill and one-piece mull assembly maximizes the stability and rigidity of any sidelited unit. This continuous system also simplifies assembly and virtually eliminates racking and bending. NOTE: Mill finish is standard on all sills. Bronze finish is also available.

High Performance Weather Stripping

Vinyl-wrapped, foam-filled, compression weatherstripping and corner seals are added to the door frame providing protection against air and water infiltration.

High-Dam Adjustable Sill

High-dam sills create a positive barrier to water infiltration. The high-dam design feature holds back the inevitable rise in the water level against the threshold as wind speed increases. Combining high-dam technology with a high quality door bottom seal, securely protects the bottom of the door unit from air and water infiltration.

The adjustable cap feature allows for easy field alterations. Fixed bumper and low-profile designs are also available to meet outswing or handicap accessible applications.

Exterior Frame System

Primed wood frames and applied brickmould are standard. For additional frame options, such as other frame depths, stainable frames, vinyl-clad frames, and PVC brickmould, please see your dealer.

CLAD+2 EXTERIOR DOOR FRAME

US Patent #6,161,342+US Patent #6,125,605

Over 150 years of Young's proven engineering goes into every Clad+2 Exterior Door Frame. As a result, you get the stability of a hardwood frame with the rot free, maintenance free, never-needs-painting characteristics of vinyl.

1. Polymer-treated hardwood core encased in high-impact vinyl retains its stability indefinitely.

2. Patented zipper leaves no exposed fasteners — a Young exclusive. Test ... That means it NEVER needs painting.

3. Stop insulators do not allow water to wick from the face of the sill.

4. Jamb ends are polymer-treated to form a second line of defense against water entry.

5. Insulators on the ends of the jambs, brickmould and all vertical components prevent water from wicking up the frame.

Now in two popular colors:

Glacial White

Sandstone

VINYL CLAD FRAMES	DOUBLE DOOR	5/0 OR 6/0 PATIO	9/0 PATIO

* Multi-latch and dead locking tongue hardware are not interchangeable.

As society continues to demand better security, more and more people are turning to multi-point locking systems. The multiple locking points combat forced entry by spreading out the pressure through the full length of the door panel. Additionally the multi-point systems lock the door in place, which keeps the door in better alignment with the frame. This helps to prevent warping in the door and keeps your entry system energy efficient.
