Cooley's Anemia /Thalassemia is a congenital blood disorder affecting mostly Mediterranean children, particularly of Italian heritage. First described by Dr. Thomas Cooley in 1925, Thalassemia was usually fatal within 3 years. Through intensive research and therapeutic breakthroughs, those born with Thalassemia now live into adulthood. The Cooley's Anemia / Thalassemia Fund is the national charity of the ICF. The Federation has donated over \$2,000,000 to improve the outcomes and lives of Thalassemia patients. Your support of our raffle and Branch 47 help us to fund the Children's Hospital of Los Angeles work focused on curing Thalassemia.
