

PRO)))SOUND™

FlexiSound 5

Product Overview

Overview

FlexiSound is an ultra thin, self-adhesive, acoustic membrane which adds extra mass to a surface or structure to reduce sound transmission. Its unique anti-vibration properties allow it to dampen sound energy and increase performance at lower frequencies. FlexiSound is often used to enhance tried and tested soundproofing systems.

Features

A tough, 5mm thin, high mass membrane providing excellent soundproofing qualities:

1. Anti-Vibration for improved low frequency performance
2. Self-adhesive backing for quick and easy installation
3. Thin and flexible for easy use on corners, RSJ's and pipework
4. High content of recycled materials
5. Helps to lower resonant frequencies of rigid elements

Specification

- **Size:** 1000mm x 4500mm x 5mm (4.5m²)
- **Weight:** 45kg per roll
- **Water:** Non-absorbent

Thermal Conductivity: 0.037W/mK

Thermal Resistance: 0.14 m² K/W

Fire: EN 13501-1: C-s3 d0
