VACUUM BLOOD COLLECTION SYSTEM

Golden Vac™ Vacuum Blood Collection System

As a leading manufacturer of medical and laboratory plastic consumables in China over 36 years with ISO13485:2016 and CE certification, Gongdong continuously invests in new and innovated technologies to improve quality control and customers satisfaction throughout whole procedures.

- Fully automated production lines distribute to reliable and accurate digital inspection individually using a robotic imaging system
- Automatic labeling machines provide speed and high-precision by intelligent control with optimal readability. Provide customized services for different requirements as various dimensions, labeling, or precise adjustments compatible with increasing altitude
- End-user and distributor training plans provided by our professional team
- Centrifugation:
≤ 1300 g (RCF) for 10 minutes at 18-25° C.

VACUUM BLOOD COLLECTION SYSTEM

Golden Vac™ Closures

- Various stopper colors conform with international standards.
- Rubber stopper is recessed inside the plastic shield to avoid potential contact from any blood drops left by a collection needle.
- High quality rubber stopper provides maximum sealing with easy puncturing and reliable self-sealing after needle piercing and preventing any possible interactions with blood samples in tubes.
- With lower residuals and impurities by suitable rubber formulation, rubber stopper chips seldom occur during needle piercing. And it also provides lower insertion forces and lower pulling forces.
- Gongdong patented non screw safety twist caps with strong, durable construction can be removed with a gentle pull, making outer plastic shield and interior rubber stopper more secured.
- Universal closures/safe-lock closures/rubber stoppers are available.
- Compatible with multi-types of automated analyzers.

Golden Vac™ Separator Gel

- High quality and reliable inert separation gel is ideal for the collection, storage, and transport of undiluted plasma for molecular diagnostics testing. When the tube is centrifuged, the separation gel migrates and forms a stable barrier between the plasma and most of the cellular elements without any interference to blood testing.

Golden Vac™ Tubes

- Versatile tubes and reliable additives for optimal performance in the laboratory.
- Tubes are made of medical grade virgin polyethylene terephthalate (PET), clear as glass with equal or better performance, offer low permeability to solvents, eliminating breakage when tubes are centrifuged at higher speed or when stopper is removed and reinserted, to reduce risk of tube breakage during handling.
- Interior tube wall is coated with microscopic silica particles which activate clotting when tubes are gently inverted.
- Suitable for incineration or autoclaving; no harmful gas is generated.

Vacuum Tubes for High Altitude

- Customized vacuum tube for high altitude to make sure accurate blood drawing in different area.

VACUUM BLOOD COLLECTION SYSTEM

EDTA Tube

Golden Vac™ EDTA Tubes contain EDTA as an anticoagulant, are widely used for determinations in EDTA whole blood clinical hematology test, especially for routine blood examination.

Description

- The EDTA inhibits the coagulation process by eliminating the calcium in the blood.
- Available in K2·EDTA or K3·EDTA.
- The anticoagulant effect of K3·EDTA is stronger than that of K2·EDTA. K3·EDTA results in greater RBC shrinkage and produces a larger increase in cell volume on standing.
- Ultrasonically and finely coated to make sure accurate additives.
- After the tube has been filled with blood, immediately invert the tube 8-10 times to mix and ensure adequate anticoagulation of the specimen.

Embedding Cassette

Embedding cassette is made of durable and porous molded plastic, which can secure the samples stored in liquid and completely avoid the chemical reaction of histological solvent and provide a variety of different colors for easily identifying different tissue samples.

Transfer Pipettes

- Plastic transfer pipettes make up for the fragility of glass pipettes, ending the history of transferring high-risk contagious liquids by glass pipettes and rubber plugs.
- Smooth inner wall reduces the damage of tissue structure and cells in the liquid, and allows quick, safe, and quantitative transfer of the liquid specimen.
- Cold-resistant; can be sterilized at high temperatures.
