

Caring for your newly installed sod

First 2 Weeks

The key to establishing new sod is to keep it properly watered for the first month. Immediately after installing sod, water thoroughly making it spongy to the step. The new sod should be kept thoroughly wet to a depth of 4" to 6" and watered 1 to 2 times a day during the first 7 to 14 days depending on the season. Lift a corner of the sod to determine the depth of moisture. In the first week, it is very important to keep the new sod damp. During this time stay off the sod so it can take root and you do not sink in and leave depressions from your foot steps. During hot weather, sprinklers should run several times a day so the new sod never dries out. If allowed to dry out, the sod will shrink, brown, and can die. The roots of your new sod will penetrate the soil faster and root down sooner if properly watered. At the end of week 2, dry up the yard enough so you can mow.

Weeks 3 & 4

The following 2 weeks are used to transition from frequent daily watering to fewer cycles per day and increase the number of days between watering. During week 3, reduce watering to 2-3 times per week to allow the sod time to dry up enough to mow. By week 4, water 1 to 2 times per week. After week 4, your new yard should be ready to go to once a week watering. Always try to water in the morning or early afternoon if possible.

Rest of the Season

Your new lawn will need more water the first growing season and especially the first 6 months. As roots grow deeper over the course of a year, it will need less water. If your lawn looks dry, it probably needs watering. The key to new sod care during this time is deep watering less frequently. This will help the roots grow down and develop a deep root system that uses less water. It is ok after the first two months to stress your lawn a little. This means let your yard dry out a bit and when you see signs of stress starting to appear, make sure to water.

Mow if Grass exceeds 4.5"

Your new lawn should be mowed at the end of week 2 or if your lawn exceeds 4.5" tall. Back off on the watering so the turf is dry to the touch and firm enough to walk on without sinking in. Do not cut shorter than 4" for the first few times you mow. Exercise caution the first time you mow so you do not damage or pull up the sod.
